**Research Assignment**

- Go to pubmed.gov and search a term/article of your personal interest as it relates to allied health or human anatomy and physiology (Should say **free article** at the bottom right of the description) ex. *Gait biomechanics post ACL repair*
- Write a reflection paper that is at least 1 page long.
    - No **larger** than 12p font, and/or 1.5 line spacing.
- The paper should answer the following questions:

- What was the hypothesis/research questions asked? (10points)
    - What is the purpose of the research, and what are they trying to figure out?
- What year was it published? (10points)
- What methods were used to obtain data? (10points)
    - A brief synopsis of how they conducted the research which should be found in the **methods** section
- Was there a control group? (10points)
    - Was there a group that they compared the treatment group to: someone who received a different treatment, no treatment, or sham treatment?
- What were the results of the study? (10points)
    - Was the hypothesis accepted, or rejected? This information is usually found in the conclusion section of the paper.
- What were some terms or information that was difficult to understand? (10points)
- What useful information did you obtain from reading the article? (40points)
